

SCYTHE

1-5 PLAYERS • 115 MINUTES

DESIGNED BY JAMEY STEGMAIER
ART AND WORLDBUILDING BY JAKUB ROZALSKI

*Scythe is a board game set in an alternate-history 1920s.
It is a time of farming and war, broken hearts and rusted gears, innovation and valor.*

BACKSTORY

The ashes from the first Great War still darken the snow in 1920s Europa. The capitalistic city-state known simply as "The Factory," which fueled the war with heavily armored mechs, has closed its doors, drawing the attention of several nearby countries.

With characters from five factions converging onto a small but highly desired swath of land, who will gain fame and fortune by establishing their empire as the leader of Eastern Europa?

OBJECT OF THE GAME

In Scythe, each player represents a character attempting to make their faction the richest and most powerful in Eastern Europa. Players explore and conquer territory, enlist new recruits, produce resources and workers, build structures, and deploy monstrous mechs. A game of Scythe typically begins with players building up their infrastructure, exploring the world, then engaging each other in combat.

The game progresses as players place stars (achievements) on the board, and it ends when a player places their 6th star on the Triumph Track. You can earn a star for accomplishing any of the following:

- Complete all 6 upgrades
- Deploy all 4 mechs
- Build all 4 structures
- Enlist all 4 recruits
- Have all 8 workers on the board
- Reveal 1 completed objective card
- Win combat (up to 2 times)
- Have 18 popularity
- Have 16 power

GOAL

The goal is to have the greatest fortune at the end of the game; a typical winning fortune is around \$75. You can accumulate coins during the game, but you will earn most of them during end-game scoring in the following three categories:

- Every star token placed
- Every territory controlled
- Every 2 resources controlled

The amount of coins you earn depends on your level on the Popularity Track. The higher your popularity, the more coins you will earn. You can also get a few bonus coins based on where you built structures.

DESIGNER'S NOTE: Why the name "Scythe"? A scythe is both an instrument of farming and a weapon of war, which perfectly encapsulates the combination of those two elements in the game. Your workers rely on the protection of your military just as much as your empire depends on the resources they produce. "Scythe" is pronounced like "sigh" and the soft "th" in "smooth".

GLOBAL COMPONENTS

1 quick-reference guide

42 combat cards (yellow)

5 player mats

1 game board

80 resource tokens

(20 each of food, metal, wood, and oil, either as wooden tokens—regular Scythe—or realistic tokens—Collector's and Art Connoisseur Editions)

80 cardboard coins

12 multiplier tokens

12 encounter tokens

6 structure bonus tiles

23 objective cards (beige)

28 encounter cards (green)

12 Factory cards (purple)

2 Power Dials

5 Riverwalk cards

5 quick-start cards

Promo Items

see note on page 32

1 power token

6 star tokens

4 structure tokens

3

4 recruit tokens

4 mech miniatures

1 character miniature

8 workers

6 technology cubes

IMPORTANT CONCEPTS

TERRITORY

A territory is a hex on the board labeled with one of the following terrain types:

FARM

FOREST

MOUNTAIN

TUNDRA

VILLAGE

LAKE

FACTORY

PRIMARY TERRAIN TYPES

HOME BASE

You have a home base that serves as a starting point and as a place to retreat after losing combat.

IT'S NOT A TERRITORY: A home base is not a territory, so by default you cannot move units, build structures, or deploy mechs onto any home base, including your own.

EXPANSION FCTIONS: There are two home bases on the game board without corresponding pieces. These are placeholders for expansion factions.

CONTROL

You control a territory if you have at least one unit there (a character, worker, or mech) OR if you have a structure there with no enemy characters, workers, or mechs. Only one player at a time can control a territory.

4

RESOURCES

Resource tokens (wood, food, metal, and oil) remain on the board once produced. You may only spend resources from territories you currently control.

SPEND RESOURCES FROM ANY TERRITORIES YOU CONTROL: You can spend resources on territories you control for actions related to territories anywhere on the board. For example, you can spend 3 metal tokens you control on one or more territories to deploy a mech on the same or a different territory (if you have a worker on that territory).

SUPPLY: When you spend a resource, remove it from the board and place it in the general supply at the side of the board. When you produce or trade for a resource (details in the **Top-Row Actions** section, pages 12–13), move it from the supply to the territory where it was produced. There are no limits to the number of resource tokens in the game—use multiplier tokens as needed.

WORKERS AREN'T RESOURCES. Resources are wood, food, metal, and oil. Workers are not resources.

EXAMPLE OF RESOURCE CONTROL: In this image, the Nordic faction controls each of the territories on which it has one of its units or structures (blue pieces, including the character miniature with the blue base). It can spend any of the resources on those territories. It cannot spend the metal tokens on the territory on the bottom left because it does not have a unit or structure there.

TYPES OF UNITS

Each of the three unit types in the game—characters, mechs, and workers—share two key similarities:

- They can move around the board (not over rivers or onto lakes, by default).
- They can transport any number of resource tokens.

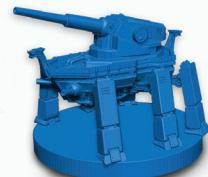

Each type of unit also has some unique traits that aren't shared by the other unit types. These concepts will be explained in detail later in the rules.

CHARACTER	MECHS	WORKERS
<p>ENGAGE IN COMBAT HAVE ENCOUNTERS GAIN A FACTORY CARD AT THE FACTORY</p>		
<p>ENGAGE IN COMBAT PICK UP AND DROP OFF ANY NUMBER OF WORKERS</p>		
<p>PRODUCE RESOURCES DEPLOY MECHS BUILD STRUCTURES</p>		

All units can move any number of resource tokens.
By default, units can move 1 territory and can't move across rivers or onto lakes.
Whenever on your turn your character/mechs force an opponent's worker(s) to retreat (through movement or combat), you lose one popularity per retreating worker.
In combat, attacker wins ties. Loser gains 1 combat card if they revealed >0 power.

Characters can engage in combat, can have encounters, and (once per game) gain a Factory card if they end their movement on the Factory. You are represented on the board by your character. You have been sent on a mission by your faction's leader to claim the uncharted lands surrounding the defunct Factory.

Mechs can engage in combat and, when moving, can transport any number of workers. **Mechs cannot transport your character.** Mechs are built for war (and for discouraging other factions from engaging in war with them), and they're big enough that they can carry workers within their iron shells.

Workers can produce resources and more workers, deploy mechs, and build structures. *These are the people of the land who have joined your cause to build an empire for you.*

PLASTIC

WOOD

A visual cue in Scythe is that tokens that take part in combat are made out of plastic (characters and mechs). All other tokens are made out of wood to show that they do not take part in combat (workers, resources, and structures).

SETUP

BOARD SETUP

ENCOUNTER TOKENS (GREEN COMPASS): Place 1 encounter token on each territory marked with an encounter symbol on the board (11 total tokens).

RESOURCES AND COINS: Place the resource tokens (wood, oil, food, and metal), coins, and multiplier tokens in a supply area next to the board.

ENCOUNTER CARDS (GREEN):
Shuffle the encounter cards and put them on the board.

OBJECTIVE CARDS (BEIGE): Shuffle the objective cards and put them on the board.

STRUCTURE BONUS TILE: Randomly select one of the structure bonus tiles and place it face-up at the bottom of the Popularity Track.

FACTION SELECTION:

Randomly shuffle the Faction Mats and Player Mats, then deal 1 of each to each player. Each player should sit near the home base for their faction with their Faction Mat and Player Mat positioned in front of them; the seating order should be Nordic, Rusviet, Crimea, Saxony, Polania (Clockwise from top). The faction mat/player mat combinations of Rusviet/Industrial and Crimea/Patriotic are banned. If you draw into either of those combinations, discard the player mat and randomly gain another.

STARTING CARDS AND TRACK POSITIONS:

Both the Faction Mat and Player Mat indicate your starting cards and track positions in the boxes on the far right of each mat.

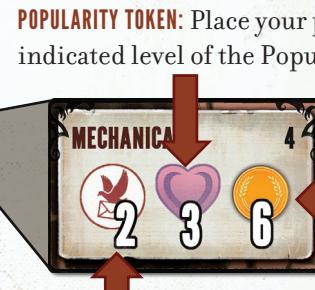

FACTION MAT

POWER TOKEN: Place your power token () on the indicated level of the Power Track (on the game board). Power is the commodity you will spend in combat.

COMBAT CARDS: Draw the indicated number of combat cards. The number of combat cards you have is public information, but the content of those cards is kept secret from opponents.

PLAYER MAT

POPULARITY TOKEN: Place your popularity token (heart) on the indicated level of the Popularity Track on the game board.

COINS: Gain the indicated amount of coins and place them on your Faction Mat. While the number of coins you have during the game is not hidden information, you are never required to reveal their total value to other players. The decisions you make in Scythe are not impacted by each of your opponent's coin totals.

CHARACTER

Place your character (miniature with the person & animal) on your faction's home base.

WORKERS

Place 1 worker on each of the territories connected to your home base by land (a total of 2 workers).

SETUP

continued

PLAYER MAT

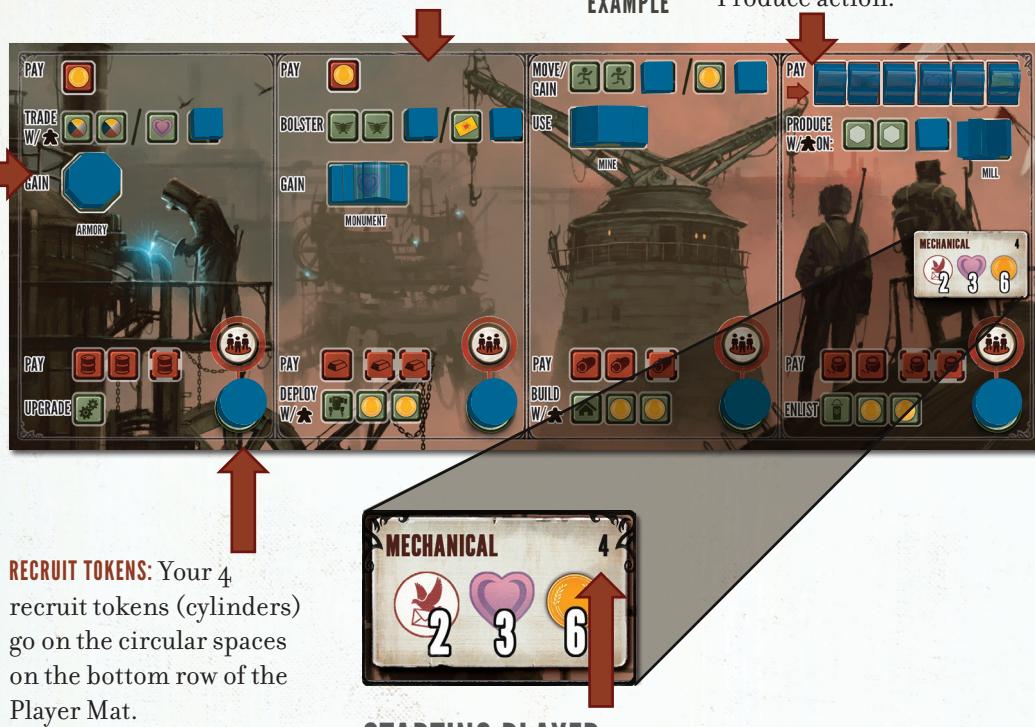

Your Player Mat is where you'll be choosing actions during the game.

STRUCTURE TOKENS: Your 4 structure tokens (wooden buildings: Armory, Monument, Mine, and Mill) go on top of the corresponding boxes. Each player has the same 4 structures.

ACTION TOKEN: Place your action token next to the Player Mat.

TECHNOLOGY CUBES: Put 6 technology cubes on your Player Mat on the green boxes that have a black square in the bottom right corner.

RECRUIT TOKENS: Your 4 recruit tokens (cylinders) go on the circular spaces on the bottom row of the Player Mat.

STARTING PLAYER:

The player with the lowest number in the label on their Player Mat will go first. Play proceeds clockwise from there.

DESIGNER'S NOTE: The higher-numbered Player Mats offer slightly more lucrative starting track positions than the others, as those players are more likely to have 1 fewer turn by the end of the game than the player who goes first.

FACTION MAT

Your Faction Mat is where you keep your mechs, stars, and coins. Each Faction Mat also shows a special ability in the upper right corner.

STARS: Place your 6 star tokens at the upper left near the faction emblem.

Do not put tokens on top of the Recruit One-Time Bonuses (bottom left corner)—you'll gain these benefits when enlisting recruits during the game.

MECHS: Place your 4 mech miniatures on top of the 4 mech/character abilities.

QUICK-START CARD

We recommend that you don't try to teach every little rule to new players. Instead, give each player a quick-start card. This card contains key information about units on one side, and the other side covers broad concepts and gives players something specific to do for their first five turns.

Your first game of Scythe isn't about devising a masterful plan or understanding every little rule. Just jump in and start pushing buttons to see how things work, referring to the rules when necessary.

HOW TO WIN: Have the most coins, including end-game coins from the Popularity Track and structure bonus.

TERRITORIES: You control a territory (hex) if you have at least one unit or structure there.

RESOURCES: Resources remain on the board. Spend resources from only territories you control.

YOUR TURN: Choose 1 of 4 sections on player mat (different than previous turn). In order, take either the top-row action, the bottom-row action, both, or neither. First pay the full cost of the action (red boxes), then gain the benefit (green boxes).

QUICK-START SUGGESTIONS

FIRST TURN: Take one of the top-row actions that no one else has tried.

SECOND TURN: Work towards taking both a top- and bottom-row action on the same turn.

THIRD TURN: Use your faction ability (if possible).

FOURTH TURN: Look at your objective cards and pick one to pursue.

FIFTH TURN: Pick 1 of the 10 different ways to place a star and try to accomplish it.

Focus on being good at 6 specific things so you can place your 6 stars before anyone else.

RIVERWALK CARD

The riverwalk cards—one per player—are a reminder as to which factions have the ability to cross into each home territory if they unlock the Riverwalk mech ability, as each Riverwalk ability is slightly different. This ability is explained for each faction on pages 15 – 17.

GAMEPLAY

Scythe uses an ongoing action-selection mechanism (no rounds or phases). Players take turns one after another until a player places their 6th star on the board, immediately ending the game.

On your turn, do the following in sequential order:

1. Place your action token on a different section of your Player Mat than where it was on your previous turn.
2. Take the top-row action on that section once (optional).
3. Take the bottom-row action on that section once (optional).

Thus, you may take a single action, both actions (from top to bottom), or neither action (but you must still move your action token). You may use resources gained from the top-row action to pay for the bottom-row action. Also, you may complete an objective card during your turn (see **Objective** section, page 26).

The costs (red boxes) and benefits (green boxes) on your Player Mat are shown by the number of empty spaces *before* the action is taken. When taking an action, first pay the cost, then gain as much or as little of the benefit as you wish. You may only take an action once on your turn, not multiple times.

After you've completed your turn (**or as you're finalizing your decision on a bottom-row action—it is crucial for turns to overlap in this manner to keep the game moving at a steady pace**), the next person in clockwise order takes their turn.

10

BOLSTER ACTION
(with structure below it)

UPGRADE ACTION
(with recruit bonus on the right)

TOP-ROW ACTIONS

The top-row actions appear in a different order on each Player Mat, though each action is identical. The Player Mat visuals and the default costs and benefits explained in this section are based on the starting position of each Player Mat.

MOVE

Do one of the following ("/" means "or"):

MOVE: Move up to 2 *different* units you control (character, worker, or mech) from one territory (or home base) to one adjacent territory. Move one, then move the other.

GAIN COIN(S): Gain \$1.

Here are some important notes about how movement works:

RESOURCES AND WORKERS: Units may pick up and drop off any number of resource tokens during a Move action.

MECHS: In addition to resources, your mechs can pick up and drop off any number of your workers during a Move action. If they do, this does not count as movement for the workers, just the mech. So you could transport some workers on a mech, and then one of those workers could move on its own. You could also use part of your Move action to move a worker onto a territory with a mech, then move the mech while carrying the worker.

RIVERS AND LAKES: By default, units may not move across rivers or onto lakes. This rule is broken by some mech abilities (see **Mech** abilities for Polania and Nordic, pages 16–17).

RIVER: A river is a body of water on the border between two land territories.

LAKE: A lake is a body of water comprised of an entire territory hex. It extends from the hex to any adjacent shoreline. Thus, in the example shown here, if a player has a special lake-movement ability, they could move from any of the surrounding territories onto the lake.

TUNNELS: For the purposes of the Move action for any unit, all territories with the tunnel icon (_tunnel icon_) are considered to be adjacent to each other.

MOVING INTO OPPONENT-CONTROLLED TERRITORIES:

CONTROLLED BY WORKERS

» If your **character or mech** move into a territory controlled by an opponent's workers (and no other units), its movement ends (even if you have a mech ability that would allow it to move further). Each of the opponent's workers on that territory immediately retreats to their faction's home base, leaving behind any resource tokens. You lose 1 popularity for each of their workers you forced to retreat—they're not happy with you for forcing them off their land (in the case that you cannot reduce your popularity any further, the workers are still forced to retreat).

» Your **workers** cannot move by themselves into territories controlled by opponent workers.

CONTROLLED BY A STRUCTURE

» Any unit can move into a territory controlled only by a structure. The player who controls the unit now also controls the territory.

CONTROLLED BY CHARACTER AND/OR MECHS

» If your **character or mech** move into a territory controlled by an opponent's character and/or mechs, its movement ends (even if you have a mech ability that would allow it to move further). The opponent still temporarily controls that territory. After you've completed all Move actions, if any of your mechs or your character share a territory with an opponent's character or mechs, combat happens (see **Combat** section, pages 22–23).

» Your **workers** cannot move by themselves into or out of territories controlled by opponent characters and/or mechs.

HOME BASE: By default, you may not use the Move action to move any unit from the board into any home base (including yours).

ENCOUNTERS: If you move your **character** into a territory with an encounter token, their movement ends and they cannot move again this turn. After resolving all combats for this turn, if your character is still in such a territory, discard the encounter token and resolve the encounter (see **Encounters**, page 24).

NO LIMIT: There is no limit to the number of same-faction units that can be on a territory.

TOP-ROW ACTIONS

continued

BOLSTER

Pay the cost (\$1) and gain one of the following:

POWER: Increase your power by 2 on the Power Track. Power is the commodity you will spend in combat.

COMBAT CARD(S): Draw 1 combat card. Combat cards are used to augment the power you spend in combat (you may spend up to 1 combat card per character/mech in combat). If a combat card would need to be drawn from an empty deck, first shuffle the discard pile to create a new deck. If there is no discard pile, no cards are drawn.

TRADE

Pay the cost (\$1) and gain one of the following:

RESOURCES: Gain any 2 resource tokens (any combination of oil, metal, food, and/or wood) and place them on any territory you control with at least one worker on it. You may not take the trade action to pay for resources if all of your workers are on your home base.

POPULARITY: Increase your popularity by 1 on the Popularity Track. Popularity is a commodity used in Encounters, and it determines your scoring multiplier at the end of the game.

STRATEGY TIP: While producing with workers will provide the bulk of most players' resources, trading has some benefits over producing that should not be underestimated. For example, trading for a desired resource is sometimes preferable to moving a worker to a territory that provides that resource. The action that you would have spent on movement can now be used for something more productive. Trading also allows players to access resources that aren't available in their homeland.

PRODUCE

Pay the cost (depending on what is shown on all exposed red rectangles *before* taking the Produce action), choose up to 2 different territories you control, and all workers on those territories may produce.

On the territories you selected for production, each worker may produce 1 token. The **resource** token is placed on the territory where it was produced. If a worker produces another **worker** (by producing on a village), after paying the Produce cost, pick up the leftmost worker of the Produce action on your Player Mat and place it on the village.

TERRAIN TYPE		WHAT IT PRODUCES	
PRIMARY TERRAIN TYPES			
	MOUNTAIN		METAL
	FARM		FOOD
	TUNDRA		OIL
	FOREST		WOOD
	VILLAGE		WORKER
	LAKE		
	FACTORY		

EXAMPLE: If you choose to produce on two territories (a farm with 1 worker and a mountain with 2 workers), you would produce 1 food on the farm and 1 or 2 metal on the mountain.

PAYMENT IS REQUIRED: As is the case with any action, you must be able to pay the full cost to take the Produce action. If you don't have the coins, popularity, and/or power, you must take other actions instead.

NO LIMIT: Any number of resource tokens or workers can be on a territory. There are no limits to the number of resource tokens in the game. If necessary, place a multiplier token next to resource tokens on the board.

WORKERS ARE PERMANENT: Once you have a worker on the board, you cannot return it to your Player Mat.

It is possible—albeit very rare—that players may find themselves in a position where they cannot take any actions (if they last took a Move action and have no coins, resources, power, or popularity). If that happens, the player must take a "dead turn" where they choose another section of the Player Mat without taking any of the actions there. We recommend being thrifty with coins early in the game to prevent this from happening.

BOTTOM-ROW ACTIONS

The bottom-row actions are in the same order on all Player Mats, but the costs and benefits vary. The Player Mat visuals and the default costs and benefits explained in this section are based on the starting position of each Player Mat.

OVERLAPPING TURNS: Usually when a player starts to take the bottom-row action (which isn't interactive but may take a few seconds to figure out), the next player can start to take their turn.

COINS: Most of the bottom actions give you at least one coin when you pay to take that action. We recommend that players take the coins before implementing the main focus of the action so they don't forget to gain those coins. A player may choose not to take the coins (e.g., if coins interfere with their objective).

COMPLETING ACTIONS: Eventually you may "complete" a bottom-row action (e.g., with the Upgrade action, at some point you may have nothing more to upgrade). After that point you may continue to pay the cost of the action to gain the coins (and the recruit bonus, if applicable).

RECRUITS: Each of the bottom actions has a Recruit Ongoing Bonus (green circle). If it is exposed, it rewards a player when they or adjacent opponents take this action. See the **Enlist** section for details (page 20).

UPGRADE

14

Upgrading improves the efficiency of the infrastructure in your growing empire. The resource used to upgrade is oil.

To upgrade, pay the cost, pick up a technology cube from any green box on your Player Mat, and place it on any empty red box with bracketed borders. Red boxes with solid black borders are off limits for upgrades.

EXAMPLE: You decide that you want to be able to produce on 3 territories instead of 2 (ignore the Mill for this example), and you want to decrease the cost of enlisting a recruit by 1 food. By taking the Upgrade action, in addition to paying the oil cost and gaining the coin benefit, pick up any technology cube from a green box (in this case, the Produce action benefit) and move it to any red box with bracketed borders (in this case, the Enlist action cost).

DEPLOY

You can deploy mechs (miniatures) to protect your workers, expand your empire, and add new abilities to your character and other mechs. The resource used to deploy mechs is metal.

To deploy a mech, pay the cost, choose **any** mech on your Faction Mat, and place that mech on a territory you control with at least one worker on it. You can't deploy mechs on lakes (even if your faction has mech abilities allowing your mechs to move onto lakes).

From now on, your character and all mechs (not your workers) gain the ability on the Faction Mat that was under the mech miniature. These abilities vary from faction to faction.

SAXONY

RIVERWALK: Your character and mechs can move across rivers onto forests and mountains.

UNDERPASS: For the purposes of Move actions for your character and mechs, mountains you control and all tunnels are considered to be adjacent to each other. For example, if your mech is on a mountain, it can move from that mountain to (a) any other mountain you control or (b) any tunnel (or your Mine).

DISARM: Before you engage in combat on a territory with a tunnel or your Mine, the combating opponent loses 2 power. This loss of power is reflected on the Power Track. You may do this once per combat, not once per unit.

SPEED: Your character and mechs may move one additional territory when moving. If any of those units move into a territory containing an opponent's character, mech, or worker, their movement ends and they cannot move again this turn. Moving from one tunnel to another still counts as 1 move, so with this ability you could move an additional territory before or after moving through a tunnel. Your mechs can pick up and drop off resources and workers in the middle of a Move action when they have the Speed ability.

BOTTOM-ROW ACTIONS

continued

RUSVIET

RIVERWALK: Your character and mechs can move across rivers onto farms and villages.

TOWNSHIP: For the purposes of Move actions for your character and mechs, villages you control and the Factory are considered to be adjacent to each other. For example, if your mech is on a village, it can move from that village to (a) any other village you control or (b) the Factory.

PEOPLE'S ARMY: In combat where you have at least 1 worker, you may play one additional combat card. You still require a character or mech to participate in combat. For example, if you have 2 mechs and 3 workers in combat, you may play up to 3 combat cards (1 for each of the mechs and 1 because you have at least 1 worker).

SPEED: Your character and mechs may move one additional territory per movement. See page 15 for full details.

16

NORDIC

RIVERWALK: Your character and mechs can move across rivers onto forests and mountains.

SEAWORTHY: Your character and mechs can move to and from lakes and retreat onto adjacent lakes (you may still also retreat those units to your home base). This allows for lake hexes to be treated the same as other territories for movement. If a mech transports workers onto a lake (during a Move action or when retreating) or if a character or mech transports resources onto a lake, you may not leave those workers or resources on the lake after moving off of it, nor

may a worker move off of the lake without the assistance of the mech. Lakes are territories, so if two factions have a lake-movement ability, it's possible for combat to happen on a lake. You cannot build a structure or deploy a mech on a lake.

ARTILLERY: Before you engage in combat, you may pay 1 power to force the combating opponent to lose 2 power. This loss of power is reflected on the Power Track. You may do this once per combat, not once per unit.

SPEED: Your character and mechs may move one additional territory per movement. See page 15 for full details.

CRIMEA

RIVERWALK: Your character and mechs can move across rivers onto farms and tundra.

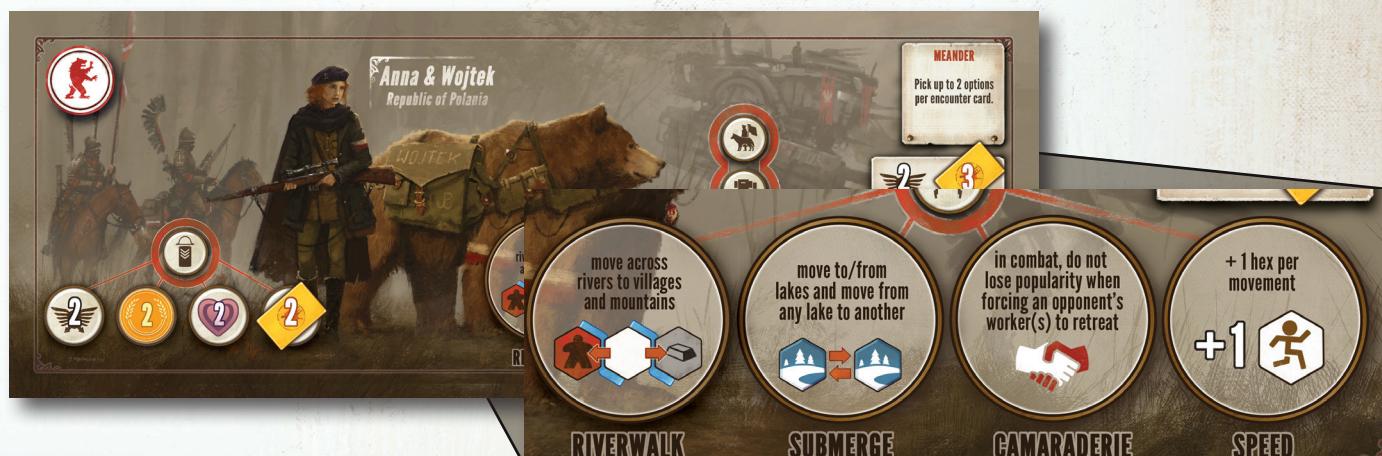

WAYFARE: Your character and mechs may move from a territory or home base to any inactive faction's home base or your own regardless of the distance. An "inactive faction" is any faction not currently in the game, including the expansion factions. Normally players may not move into any home base, but this is an exception to that rule.

SCOUT: Before you engage in combat, steal one of the opponent's combat cards at random and add it to your hand. You may do this once per combat, not once per unit.

SPEED: Your character and mechs may move one additional territory per movement. See page 15 for full details.

17

POLANIA

RIVERWALK: Your character and mechs can move across rivers onto villages and mountains.

SUBMERGE: Your character and mechs may move to and from lakes and move from any lake to another (similar to tunnel movement, but with lakes). If a mech transports workers onto a lake or if a character or mech transports resources onto a lake, you may not leave those workers or resources on the lake after moving off of it, nor may a worker move off of the lake without the assistance of the mech. Lakes are territories, so if two factions have a lake-movement ability, it's possible for combat to happen on a lake. You cannot build a structure or deploy a mech on a lake.

CAMARADERIE: You do not lose popularity when forcing an opponent's workers to retreat after winning combat as the aggressor. This applies any time on your turn when your character or mechs force an opponent's workers to retreat after combat.

SPEED: Your character and mechs may move one additional territory per movement. See page 15 for full details.

BOTTOM-ROW ACTIONS

continued

BUILD

You can build structures (structure tokens) to enhance your actions, control territories, and get end-game bonuses. The resource used to build structures is wood.

To build a structure, pay the cost, pick up any structure from your Player Mat, and place it on a territory you control with at least one worker on it.

LIMIT 1 PER TERRITORY: Only 1 structure can be built on each territory. So if you're the first player to build a structure on a specific territory, neither you nor any opponent may build another structure there.

STRUCTURE CONTROL: Opponents can't use your structure abilities. You always get the abilities from your structures even if you don't control the territories they're on (except for the Mill -- you can't Produce on the Mill's territory if you don't control that territory).

TERRITORY CONTROL: A territory with one of your structures on it is under your control even if you have no units there. However, if an opponent's unit is on a territory with your structure, that territory is under their control.

PERMANENCE: Structures cannot be destroyed or moved.

FACTORY: You may build on the Factory territory.

PLACES YOU CAN'T BUILD: Your home base isn't a territory, so you can't build there. You also can't build structures on lakes.

ONGOING BONUS: The benefit revealed by removing a structure from your Player Mat is an additional benefit you will gain when taking the top-row action directly above it in the future.

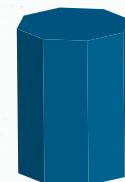

MONUMENT: Whenever you take the Bolster action, also gain 1 popularity.

MILL: Whenever you take the Produce action, the territory with the Mill may count as an extra (bonus) territory for production. The Mill will produce as if it were a worker. If there are actual workers on the Mill territory, they may also produce resources.

MINE: The Mine acts as a tunnel that only you can use. You may move units to and from your Mine as if it is a tunnel (even if an opponent controls the territory the Mine is on). Unlike the other structures, this is an ongoing ability associated with all unit movement.

ARMORY: Whenever you take the Trade action, also gain 1 power.

END-GAME BONUS: At the end of the game, players will gain coins for achieving the goals shown on the structure bonus tile that was randomly selected during setup. You gain this bonus even if you don't control the territories the structures are on. This bonus represents how property values have strengthened your expanding empire.

EXAMPLE: The structure bonus for this game is for the number of lakes adjacent to your structures. If you had the two structures positioned as shown here, you would gain coins for 4 lakes (a total of \$6). You gain those coins even if you do not control the territories your structures are on.

The 6 structure bonus tiles are as follows:

	1 : 2
	2 - 3 : 4
	4 - 5 : 6
	6 : 9

Number of tunnel territories adjacent to your structures. Only count each tunnel once. A Mine does not count as a tunnel for this purpose, and rivers do not break adjacency.

	1 : 2
	2 - 3 : 4
	4 - 5 : 6
	6 - 7 : 9

Number of lakes adjacent to your structures. Only count each lake once.

	1 : 2
	2 - 3 : 4
	4 - 5 : 6
	6 - 7 : 9

Number of encounters adjacent to your structures. Only count each encounter once. These count whether or not the encounter tokens are still there. Rivers do not break adjacency.

	1 : 2
	2 : 4
	3 - 4 : 6

Number of tunnel territories with your structures on them. A Mine does not count as a tunnel for this purpose.

	1 : 2
	2 : 4
	3 : 6
	4 : 9

Number of your structures in a row (any continuous straight line is fine; only count the longest row of structures you have; rivers do not break continuity).

	1 / : 2
	2 / : 4
	3 / : 6
	4 / : 9

Number of farms and tundras with your structures on them.

ENLIST

You can enlist new recruits (cylindrical tokens) to join your forces. The resource used to enlist recruits is food.

ONE-TIME BONUS: To enlist a recruit, pay the cost, pick up a recruit token from any section of your Player Mat, place it on any open Recruit One-Time Bonus space on your Faction Mat, and immediately gain the depicted bonus. This represents what your new recruit is immediately contributing to your forces. The token remains there permanently—it can't be moved.

The four one-time bonuses are:

- Gain 2 power
- Gain 2 coins
- Gain 2 popularity
- Draw 2 combat cards

ONGOING BONUS: In addition to the one-time bonus, each recruit gives you a Recruit Ongoing Bonus related to the action from which you selected the recruit token (the bonus in the circle). This represents a skill the recruit brings to your force.

For the rest of the game, whenever *you or the player to your immediate left or right* (these players are shown in the icon in the red circle) take the bottom-row action in the section of the Player Mat from which the recruit was taken, you may gain the specified bonus. Top-row actions or a similar action on a Factory card (see **Factory** section, page 25) do not count.

PLAYER ORDER: If more than one player would gain a Recruit Ongoing Bonus, the active player goes first, followed by the player to their left, then the player on their right. If one of those players places their 6th star as a result, the game immediately ends (see **Game End and Scoring**, page 28).

PROCLAMATION: You must announce when you take bottom-row actions so adjacent players know to check for Recruit Ongoing Bonuses.

TWO-PLAYER RULES: In a 2-player game, whenever your opponent takes an action that would give you a Recruit Ongoing Bonus, you only gain it once.

EXAMPLE: Whenever the blue (Nordic) player OR the player to the left or right of the Nordic player takes the Build action, the Nordic player gains 1 popularity, which is in the green circle.

FACTION ABILITIES

Each faction has a special ability indicated at the upper right of the Faction Mat.

RUSVIET (RELENTLESS): You may choose the same section on your Player Mat as the previous turn(s).

The Rusviets push their people hard, day after day, to achieve their ultimate goal. While other factions let their infrastructure take a break from turn to turn, the Rusviet faction may choose the same section of their Player Mat as the previous turn(s). This ability also applies to a Factory card if you have one (see Factory section).

CRIMEA (COERCION): Once per turn, you may spend 1 combat card as if it were any 1 resource token.

The Crimean faction has a longstanding tradition of selling information to the highest bidder. They may spend 1 combat card per turn as if it were a resource to pay for something (1 combat card = any 1 resource token, regardless of the number on the combat card). Combat cards are still worth nothing at the end of the game.

NORDIC (SWIM): Your workers may move across rivers.

Nordic workers are accomplished swimmers who refuse to complain even when wading through the coldest of waters. They may move across rivers onto any type of terrain (except lakes). This ability applies only to workers, not the character and mechs.

POLANIA (MEANDER): Pick up to 2 options per encounter card.

Thanks to Anna's charismatic bear companion, Wojtek, the pair tend to stretch short encounters into longer adventures. Instead of picking just 1 option per encounter card, the Polanian faction may choose up to 2 different options per encounter card in any order. The benefit from the first selected option may be used to pay the cost for the second selected option. Only one encounter card is drawn.

SAXONY (DOMINATE): There is no limit to the number of stars you can place from completing objectives or winning combat.

Saxony's methodical approach to conquering the eastern lands surrounding the Factory is all about asserting force and completing specific missions. The Saxon faction may complete both of their objective cards (they don't discard the second card after achieving the first), and they are not limited to 2 combat victory stars. If Saxony has available stars, after winning combat, they *must* place the star.

DESIGNER'S NOTE: One of the subtle benefits of some of these faction abilities is that they help to teach and remind players of the global rules of Scythe...by breaking those rules. For example, when you read that the Rusviet faction can choose the same section of their Player Mat on subsequent turns, you also learn that under normal circumstances, you can't choose the same section twice in a row. In a game with lots of rules to remember, I found that these subtle reminders really help.

COMBAT

Combat may happen at the end of a player's Move action (after all units have moved but before the player takes a bottom-row action). If that player's character and/or mechs share a territory with an opponent's character and/or mechs, combat occurs. It's possible for this to happen on multiple territories; in that case, the active player (the attacker) chooses the order in which these combats occur.

Combat happens only between the two players whose units share a territory, either of whom can gain a star for winning the combat. Other players may try to influence the combating players by bribing them with coins (see **Alliances and Bribes**, page 26).

NO REQUIREMENTS: You may initiate combat even if you have 0 power and/or 0 popularity.

ATTACKER ADVANTAGE: If the attacking player has a mech ability that impacts combat, they use that ability first, followed by the defending player. Also, if combat results in a tie, the attacking player wins.

SELECT POWER

Simultaneously and secretly select a number on your Power Dial (align the number with the icon at the top right). That is the amount of power you will spend, so you cannot choose a number higher than the amount of power you currently have on the Power Track. The track goes up to 16 but you can only spend up to 7 power on your Power Dial.

ADD COMBAT CARD(S) (OPTIONAL): By default, for each of your units involved in the current combat (character and/or mechs), you may tuck 1 combat card from your hand behind the Power Dial. You may do this even if you select 0 power on your Power Dial.

The number of combat cards you have in hand is public information, but during combat you may conceal whether or not you've used any of those cards. The combat deck contains the following cards:

POWER	QUANTITY
2	16
3	12
4	8
5	6

DESIGNER'S NOTE: You might be surprised by how few combats happen in a game of *Scythe*, especially given the universal presence of mechs in Jakub's art. However, if you look at all of the illustrations, you'll notice that very few of the mechs are actually fighting. In that way, *Scythe* is just as much about the threat of combat as it is actual combat. If your neighbor has built up a big pool of power and combat cards, you're less likely to attack them. Similarly, you might position workers on key territories to dissuade more aggressive players from attacking you there due to the loss of popularity if they win. It is this tension that exemplifies the core theme of *Scythe*: the intersection of farming and war.

REVEAL

Both players reveal their Power Dials and selected combat cards simultaneously. The value provided by any combat cards provides an additional bonus to the power you spend from the Power Track as indicated on your Power Dial.

The player with the highest total power wins the combat (ties go to the attacking player). Both players then pay the amount of power they selected on their Power Dials, and they discard any combat cards they used face-up (you don't adjust the Power Track for combat cards—they're just a temporary boost).

WINNER: The winner gains (or maintains) control of the territory and all resource tokens on it. The winner also places 1 star token in the combat space of the Triumph Track (see **Placing Stars**, page 27) if they haven't already placed 2 stars for combat victories. If the winner was the attacker, they lose 1 popularity for each worker they forced to retreat by initiating and winning combat. Also, if there was an encounter token on the territory and the winner has a character there, they now perform the encounter.

LOSER: The loser must retreat all of their units—mechs, characters, and workers—from the combat territory to their home base (pick up those units and put them down on their home base). All resources those units were carrying remain on the territory and are now under the control of the winner. **If the loser revealed at least 1 power on the dial or through combat cards, they gain 1 combat card as they retreat.**

LIMITED STARS AND GAME END: Each player can gain a maximum of 2 stars for winning combat (with the exception of the Saxon player, who can gain unlimited combat victory stars), but they may still engage in future combats after they've achieved those 2 stars. If your 6th star is placed but you still have a combat remaining on your turn, the game ends and any units you moved to initiate that combat will move back to the territory from whence they came.

BATTLE IN A LAKE: Lake battles can happen between factions like Polania and Nordic that have activated lake-related mech abilities. If a mech transporting workers is attacked while on a lake and the attacker wins combat, the attacking player loses 1 popularity for each of those workers (they are forced to retreat with the mech to their home base).

EXAMPLE: John takes a Move action, first moving his character onto an unoccupied farm, then moving a mech carrying 2 workers onto a territory controlled by Sandra. Sandra has her character, a mech, a worker, and 3 food tokens on that territory.

John has 10 power and Sandra has 4 (this is shown on the Power Track on the board). John turns his dial to select 7 power. He has one combat unit (the mech), so he can add 1 combat card from his hand, but he chooses not to do so.

Sandra decides to spend 4 power on her Power Dial. She has both her character and a mech on the territory, so she can spend up to 2 combat cards if she wants to. She chooses to just play a 3-power card and tucks it behind her Power Dial.

When they've both finalized their decisions, they reveal their Power Dials at the same time. Sandra groans—she tied John's total power (7 to 7), but attackers win ties!

So John takes over the territory and the 3 food, and Sandra's units retreat back to her home base. John loses 1 popularity because, as the attacker, he forced 1 worker to retreat. John also places a combat victory star on the board.

Sandra's only compensation is that she gets to draw a combat card since she revealed at least 1 power on the dial or through combat cards.

STRATEGY TIP: Just because an opponent has a lot more power than you doesn't necessarily mean they'll win in combat against you. They don't know how much power you will spend or the amount of power your combat cards will add (combat cards aren't worth anything at the end of the game, so spend them early and often). The puzzle of combat is outwitting your opponent, especially when they think they're going to win.

ENCOUNTERS

As your character treks across Eastern Europa, they will encounter a number of local people and situations. Each encounter will present you with three options to determine how you want to interact with the people. The choice you make will often impact the peoples' view of you, represented in the game by your popularity.

When you move your character onto a territory with an encounter token on it (⊗), their movement ends and they cannot move again this turn. When your Move action is completely over and you've resolved all combats (but before you take a bottom-row action, if applicable), discard the encounter token and draw an encounter card. **Only characters will trigger an encounter.**

Show the art to the other players and read the thematic text (the text in all caps) out loud. Then read through the various costs and benefits on the options and choose one (you must choose one and pay the cost if applicable, though you may gain as much of the benefit as you'd like). After you make your selection, discard the encounter card to the bottom of the encounter deck face-down.

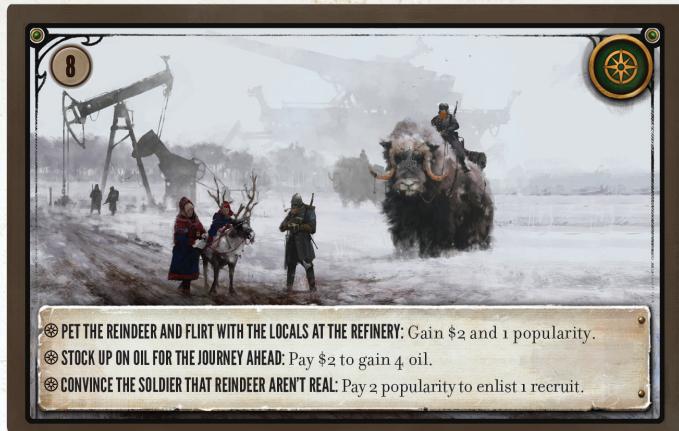

REQUIRED COST AND OPTIONAL BENEFIT: If you don't have popularity or coins to pay for certain options, those options aren't available. You may gain as much of the benefit as you like (e.g., if a benefit would give you 2 metal and 1 worker but you don't want the worker, you can just gain the 2 metal).

BENEFIT LOCATION: Any resources, structures, mechs, or workers you gain from the encounter card go on the same territory as your character (i.e., where the encounter took place).

ISOLATED COST AND BENEFIT: If an encounter card instructs you to gain something or perform an action, you do not pay any additional costs or gain additional benefits beyond those on the encounter card, nor do you trigger any Recruit Ongoing Bonuses.

COMBAT: If a character moves onto a territory with an encounter token and an opponent's mech, thus initiating combat, the encounter only happens after the character wins combat. Otherwise the encounter token remains on the territory.

NUMBER: The number in the upper left corner is just for referencing the card for questions posted on places like BoardGameGeek.com or stonemaiergames.com.

DESIGNER'S NOTE: We made a specific design decision with the beautifully illustrated encounter cards. Rather than tell the players what they're seeing through a label or flavor text, we'll let you use your eyes to see the scene you've stumbled upon. There's often a lot happening in these scenes (it's usually not just one specific thing that's happening), and the three options explain the various ways in which you can act. Encounter cards are shown to all players when they're drawn, so your gaming group can integrate as much or as little of the story into the way they play Scythe as they like. We're giving you the same visual freedom you'd experience if you stumbled upon these scenes in real life rather than restricting you to the limitations of flavor text—after all, a picture is worth a thousand words.

THE FACTORY

The Factory is the centerpiece of the Scythe board. It is a place of technological innovation and untapped power. Unlike most other territories, the Factory does not produce any resources. At the end of the game, the Factory is worth a total of 3 territories (instead of just 1) to the player who controls it.

When your Move action is completely finished (after winning combat if necessary), if your character is on the Factory for the first time this game, look through the Factory cards on the board. You must choose one card and return the rest to the board.

The first player to look at those cards will see cards equal to the number of players +1; each subsequent player to visit the Factory with their character will see one fewer card. It's good to get there first.

FACTORY CARDS

Each Factory card is the equivalent of a fifth section of your Player Mat (place it next to your Player Mat).

USING FACTORY ACTIONS: The Factory card is treated as any other section on your Player Mat. On your turn, you may place your action token on the Factory card and take one or both actions (starting with the top-row action if you choose to take both).

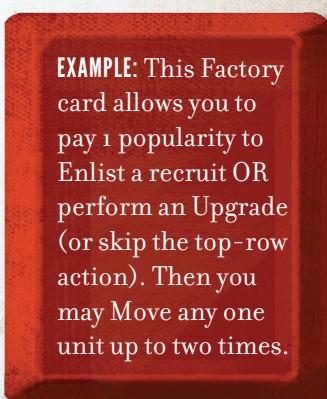

SEPARATE FROM PLAYER MAT BONUSES: Even if the Factory card action does something similar to another action on your Player Mat, they're completely independent of one another. So you get neither Recruit Ongoing Bonuses, Structure bonuses, nor coins from similar actions on your Player Mat.

MOVE: All Factory cards have a bottom-row Move action. It's a little different than a standard Move action, as it says, "Move one unit up to two times within the same Move action."

- ➊ **CONSISTENT WITH OTHER RULES:** All other rules for movement still apply, especially those that say that the entire Move action ends if your character moves onto a territory with an encounter token or a character/mech moves onto a territory occupied by an opponent's unit(s).
- ➋ **MINE:** If you have a Mine, you may move through the Mine with this Move action.
- ➌ **SPEED:** If you've unlocked the Speed mech ability, one of your mechs or your character may move up to 3 territories with this Move action.

ONE-CARD LIMIT: You may have at most one Factory card (the one you choose the first time your character goes to the Factory).

PERMANENT SELECTION: Your selection is permanent—you may not switch your Factory card for another card if your character ends a future Move action on the Factory.

STRATEGY TIP: Don't underestimate the power of being able to move every turn. Without a Factory card, you can only move once every other turn, but once you get that card, you become much more nimble and responsive than players without that capability.

OBJECTIVES

Each player starts the game with 2 objective cards that are kept secret from the other players. You may reveal a completed objective card during your own turn before or after you complete a top- or bottom-row action. If you do, place 1 star token on the objective space of the Triumph Track and discard the card along with your other objective to the bottom of the objective deck. You can only achieve 1 objective star, unless you're the Saxon player, who can achieve up to 2 objective stars.

You may wait to reveal your completed objective if you wish, but you must meet the entire objective requirements at the time you reveal it.

DESIGNER'S NOTE: *It may seem a little odd that each player has 2 objective cards but may only complete one of them. There are a few reasons for this. The first is that the alternative would be to have each player draw 2 cards at the beginning of the game and keep 1. However, I prefer not to ask players to make decisions before the game begins, as it makes the game more welcoming to new players and gives experienced players more freedom depending on how the game starts to play out. The second is that it gives players the flexibility to change strategies mid-game. Maybe you were pursuing one strategy, but that strategy didn't end up working out. No problem—you still have another objective card to use.*

26

ALLIANCES AND BRIBES

Players may make informal agreements (e.g., "I won't attack you this turn if you don't attack me next turn"). The only tangible items that may be exchanged are coins. In tournament play, coins may not be exchanged for deals or alliances.

You can't negotiate your way out of a combat that has already begun—that is, if a player moves their character and/or mechs onto a territory you control with your character and/or mechs, at the end of their Move action, the two of you must engage in combat (you can't pay them off at that point, though you could try to influence the outcome). Agreements made between players are not enforceable.

PLACING STARS

When you reach a pinnacle of empire building, your faction rewards you with a star. Stars are worth coins at the end of the game.

Here are the ways to place stars, as shown on the Triumph Track:

- Complete all 6 upgrades
- Deploy all 4 mechs
- Build all 4 structures
- Enlist all 4 recruits
- Have all 8 workers on the board
- Reveal 1 completed objective card
- Win combat (up to 2 times)
- Have 18 popularity
- Have 16 power

When you achieve one of these goals, you must place a star on the appropriate space on the Triumph Track. **You cannot lose a star after you've placed it.** For example, if you place a star for reaching 18 popularity and you later drop below 18, the star remains on the track.

By default, each player may complete each of these goals exactly one time. Having a star on a goal does not prevent other players from placing their stars on the same goal.

STRATEGY TIP: You can't place more than 6 stars, so it's generally better to focus on completing 6 specific goals than trying to do a little of everything.

GAME END AND SCORING

The game immediately ends when a player places their 6th star token, even if they have other things they could do that turn or other things would happen afterwards.

EDGE CASES

If the 6th star comes from taking a bottom-row action, gain the primary benefit, the coins, and the Recruit Ongoing Benefit before placing the star.

If you have units (character, mechs, or workers) remaining on a territory with an opponent's units (from a Move action), you must undo that portion of your Move action, returning the unit(s) to the territory they moved from.

If you place a star for total popularity or total power as a recruit bonus on an opponent's turn, that placement happens *after* the opponent takes the action (e.g., build a structure) in clockwise order and only if that opponent didn't place their 6th star by taking that action.

DESIGNER'S NOTE: *Scythe* incentivizes players to end the game if possible by making stars worth coins and denying additional turns to opponents. This may result in some opponents having one fewer overall turns than the player who placed their final star.

SAMPLE SCORING ROUND

The first time you play *Scythe*, we recommend that you run a sample scoring round during the game so players have a feel for the actual end-game scoring in advance. After any player places their first star, pause the game to let players calculate their current score. This is just for the sake of example—this scoring does not actually happen until the end of the game.

END-GAME SCORING

Accumulate your final fortune—coins you had before the game end was triggered plus end-game coins—to determine the winner. You should have a mound of coins in front of you before announcing the total to the other players.

To determine how many coins you earn for each of the three scoring categories, look at your level on the Popularity Track and pick up coins for that category (do this on your own—there is no need for a “banker”).

EXAMPLE: If you have 10 popularity, you will earn \$4 for every star you placed, \$3 for each territory you control, and \$2 for every 2 resource tokens you control. If you have 18 popularity, you score within the 13–17 popularity level.

VARIANT

DELAY OF GAME: Because of the various end-game scoring categories and their connection to popularity, it's difficult for players to determine who is in the lead (this is intentional). However, it is possible for a player to interrupt the game to calculate the final score for each player as they plan out their next few moves. That's not fun for anyone. The Delay of Game variant says that if a player delays the game (while the game is being played, not during end-game scoring) for more than 10 seconds by trying to calculate the final score, they lose 2 popularity.

SCORING CATEGORIES

COINS IN HAND: The coins you accumulated during the game count for end-game scoring.

EVERY STAR TOKEN PLACED: Gain coins for every star token you placed during the game.

EVERY TERRITORY CONTROLLED: Gain coins for every territory you control (including lakes). Home bases aren't territories. You control each territory where you have a worker, mech, or character, or where you have a structure (but no enemy units).

FACTORY: At the end of the game, the Factory is counted as 3 territories to the player who controls it.

EVERY 2 RESOURCES CONTROLLED: Gain coins for every 2 resource tokens you control (e.g., if you control 13 resource tokens and have 10 popularity, you'll gain a total of 12 coins). Workers are not resources. You control all resources on territories where you have a character, worker, mech, or a structure not occupied by an opponent's unit.

STRUCTURE BONUS TILE: Gain coins based on the number of structure bonuses you achieved. You gain this bonus even if you don't control the territories your structures are on.

DECLARING THE WINNER

Announce your coin total, and the player with the most coins wins! If multiple players have the same total, use the following as tiebreakers (in order):

1. Number of workers, mechs, and structures
2. Power
3. Popularity
4. Number of resource tokens controlled
5. Number of territories controlled
6. Number of star tokens placed on board

ACHIEVEMENT SHEET: The winner of the game may write their name up to 2 times on the achievement sheet to memorialize their victory. This document commemorates the first time any player wins under a certain condition (e.g., the first victory with a specific faction).

CHARACTERS

You are represented on the board by your character, who has been sent on a mission to make your faction's claim to the uncharted lands surrounding the defunct Factory. Each character unit is comprised of a person and their animal companion.

While each of the characters appears to be functionally the same as the others, their unique abilities are manifested in their respective faction and mech abilities. A full backstory for each character can be found on the Stonemaier Games website, but here is a short description of each one:

ANNA & WOJTEK (POLANIA REPUBLIC): An expert marksman and a helpful bear, Anna and Wojtek traveled across the countryside during the Great War, becoming living legends as they distinguished themselves in battle and showed compassion to even the poorest farmers. With the Factory shut down and rumors swirling about a growing Rusviet force, Anna and Wojtek have accepted a mission to ensure the unity and independence of Polania by securing the eastern border and patrolling the lands surrounding the Factory.

GUNTER VON DUISBURG WITH NACHT & TAG (SAXONY EMPIRE): During the war, Gunter and his wolves led elite mech squads across the forests and mountains of Saxony and Europa. His name was both feared and respected, and his jacket grew heavy with medals of honor. Now that the war is over, the Emperor has asked Gunter to embark on a new adventure to the east, where he sees a fresh opportunity to expand the Saxony foothold on the unclaimed lands surrounding the Factory. Tag is shown on several encounter cards, but she is not part of the character miniature.

ZEHRA & KAR (CRIMEAN KHANATE): The firstborn daughter of the Khan of the Crimean Tartars, Zehra is able to see through her eagle's eyes, heightening her already formidable skill with the bow. Though her father was loath to adopt the Factory's advances, he realized that the world was changing and he could not leave the Khanate exposed to its rivals. Reluctantly, he has tasked his daughter with an expedition to the north for the purpose of acquiring more modern technology and ensuring lasting peace for their people.

BJORN & MOX (NORDIC KINGDOM): Bjorn, the descendant of a renowned Viking family, was saved from perishing in a blizzard by a kindly muskox. After surviving the ordeal, Bjorn took the creature as his mount and named him Mox. Together they embarked on a series of adventures across the land, serving as ambassadors to other tribes, executing military operations, and seeking out new oil reserves. The King has now sent them southward to add new villages and farms to the kingdom, either by diplomacy or by force, as well as to explore the Factory with the hope of gaining a technological advantage for future wars.

OLGA ROMANOVA & CHANGA (RUSVIET UNION): When Olga's first love, Viktor, went missing during the Great War, she vowed to find him again. She joined the Rusviet military intelligence service with Chang, her Siberian tiger, at her side. With her intelligence and ambition, she has risen quickly through the ranks, and has used her newly-earned authority to launch a full-blown invasion into the western lands—a desperate attempt to find her beloved Viktor, with the full strength of the Rusviet military at her back!

HIGHLIGHTED RULES

RESOURCES: All units—characters, mechs, & workers—can carry around resources (any number).

TURNS AND PLAYER MATS: On your turn, you must choose a different section of your Player Mat than you did the previous turn. Take either the top-row action, the bottom-row action, or both (starting with the top action). First pay the full cost of the action (all icons on exposed red boxes), then gain the benefit (exposed green boxes). If you select a bottom-row action, the player to your left may start to take their turn while you decide exactly which upgrade, mech, structure, or recruit you will gain. Remember to take the coins from the bottom-row actions!

MOVE ACTION: You must move different units (not the same unit multiple times). You may choose only to use part of the Move action if you only want to move one unit. A mech can transport workers as part of its movement, then one of those workers could also move.

PRODUCE ACTION: Produce on 2 different territories. Each worker on those territories may produce 1 resource token. So if you have 3 workers on a forest and 2 workers on a farm, a Produce action generates 3 wood on the forest and 2 food on the farm.

WORKERS: Workers are not resources, but they are produced on villages just like resources are produced on other terrains. Just as with any Produce action, first pay the full cost on all exposed red boxes on the Produce action, then Produce the worker(s) by taking the meeple from your Player Mat (left to right). You may choose not to produce a worker, as it can increase the cost of future Produce actions. Once produced, workers may never return to your Player Mat.

TRADE: When taking the Trade action, choose any 2 resource tokens (either the same or different types) and place them on a territory you control that contains a worker.

BOLSTER: Gain power on the Power Track or draw combat card(s). If the combat card deck runs out, shuffle the discard pile to form a new deck.

BOTTOM-ROW ACTIONS: You may continue to pay to take a bottom-row action for the coin(s) even after you've achieved a star for the action. This will continue to trigger Recruit Ongoing Bonuses.

UPGRADE: Pick up a technology cube from any green box on your Player Mat and place it on any red bracketed box on your Player Mat.

MECHS: Only mechs may carry around workers (any number of workers)—not characters. Mech abilities apply to all mechs and your character. Each faction has a slightly different Riverwalk mech ability. If a mech has the Speed ability, it may pick up and drop off workers/resources mid-movement.

RIVERWALK: Each faction has a slightly different version of the Riverwalk ability, allowing them to move across rivers onto two specific terrain types.

STRUCTURES: Only a single structure may be present on each territory. Structures can't be built on lakes.

RECRUITS: Gain a One-Time Recruit Bonus when taking the Enlist action. From then on, gain a Recruit Ongoing Bonus whenever you or the player to your left or right take the bottom-row action corresponding to that bonus.

COMBAT: Only characters and mechs participate in combat (moving a character or mech onto a territory containing an opponent's worker is not combat). Ties are won by the attacker. If the loser of combat revealed any power during the combat (either on the Power Dial or via combat cards), they gain a combat card. Both the winner and loser must pay the power they selected on the Power Dial.

RETREATING WORKERS (FORCED): You only lose popularity for forcing an opponent's worker to retreat on your turn. That is, if you are attacked by a mech with workers on it and you win the combat, you do not lose 1 popularity for forcing each of those workers to retreat. On your turn, you may force opponent workers to retreat even if you don't have enough popularity.

ENCOUNTERS: Only characters may have encounters. To choose an option on the encounter card, you must be able to pay the cost (if any). All resources, units, or structures gained from an encounter card go on the territory where the encounter occurred. Benefits gained from encounters do not trigger Recruit Ongoing Bonuses.

FACTORY: Only characters may claim Factory cards (1 per player). Actions taken on Factory cards do not trigger Recruit Ongoing Bonuses or Structure Bonuses.

OBJECTIVES: You may reveal a completed objective on your turn. Discard the other objective card (unless you're playing Saxony).

STAR PLACEMENT: Once a player places a star on the Triumph Track, it cannot be removed. Having a star on a goal does not prevent other players from placing their stars on the same goal. If a player places their 6th star, the game immediately ends. Nothing else happens other than end-game scoring.

END-GAME SCORING: At the end of the game, remember to include coins you earned during the game as part of your final coin total. When scoring for territorial control, you control a territory and all resources on it if you have a unit there or if you have a structure there (unless an opponent has units on that structure's territory). Make sure to only score for every two resource tokens you control, not every resource token.
